GC/MS #1 - Preventative Maintenance and Performance Check

July 8, 2025

On June 26, 2025, Preventative Maintenance servicing was performed on SD GC/MS #1 by Agilent Technology. The preventative maintenance consisted of source cleaning, filament replacement, inlet maintenance to include gold seal and liner replacement. The column was replaced with a new column, a DB-5MS-UI column with the dimensions of 30 meters x 0.250mm x 0.25µm. The maintenance was scheduled as part of the ongoing yearly instrument maintenance program at the Laboratory. LOG-15-09 speaks to the performance verification check to be performed after instrument repair or maintenance. Section 3.5 reads:

> Maintenance work performed on an instrument shall be completed either by an instrument service technician or by an individual having knowledge pertinent to instrument repair. After an instrument is repaired, it shall be tested to verify that it is functioning properly by the satisfactory analysis of a positive control.

After completion of the servicing, the instrument was allowed to pump down for several hours. On Sunday afternoon – June 29, the instrument was tuned to verify that the mass spectrometer could accurately assign mass values and that there were no leaks in the system. The instrument passed the tune demonstrating accurate mass assignment with no leaks detected. On Sunday afternoon, June 29, a performance check was commenced to verify the instrument was fit for purpose. The Laboratory utilizes as a primary method on this instrument an analysis that will identify most unknown substances submitted. This method is titled BCCL GENDRUG. Additional methods are also utilized for more sensitive substances such as psilocin and higher temperature eluting substances such as sildenafil. These methods are DrugTest50_20x and DrugTest50-FHTI respectively. A review of the data generated by the performance check begun on June 30 revealed there was a problem with three of the standards, delta-8-THC (R-24-040, datafile SD GCMS 1 PC-062925-007), LSD (R-24-021, datafile SD GCMS 1 PC-062925-009), and trazodone (R-24-012), datafile SD GCMS 3 PC-062925-024). The data for delta-8-THC appeared negative. Data for the LSD standard displayed a peak; however, the abundance of the peak was low. Therefore, this sample will be run on a more sensitive method. The trazodone data displayed a partial peak. This is due to the compound being a late eluting compound. This sample needs to be run on a longer method. Upon further investigation it was noticed that the delta-8-THC vial insert was missing. A new delta-8-THC standard was prepared, and the three samples were reinjected on May 30. The reinjection produced acceptable results for all samples: the delta-8-THC, LSD, and trazodone standards.

The column installed, DB-5MS UI (Serial # US4801811H), and methods (BCCL GENDRUG, DrugTest50_20x, and DrugTest50-FHTI) delivered results which were consistent with prior results. This included mass spectra verification with the reference libraries utilized by the Seized Drug section. Also, retention time verification for all tested substances were evaluated against past testing of the system. This evaluation determined that all retention times after the preventative maintenance were slightly higher as compared with before preventative maintenance retention times. This outcome is expected, as the column is new and the number of theoretical plates differs from those of the previous column. DrugTest50-FHTI was

a test method crafted by adding additional hold time to the end of the Drug Test50_20x method to extend the run time to forty minutes, thereby allowing time for more complex substances like sildenafil to elute.

Consistent with the prior performance check, achieving baseline resolution remains a critical objective in analytical method validation. The potential for co-elution or marginal separation must be acknowledged, as these phenomena directly affect the reliability of compound identification. Upon analysis of drug standards using the current system, the majority of compounds demonstrated adequate baseline separation. However, certain analyte pairs failed to achieve baseline resolution using the BCCL GenDrug method, including:

- Diphenhydramine and Carisoprodol
- 2C-I and Phencyclidine
- Codeine and Delta-8-THC
- Hydrocodone and Hydromorphone
- m-Fluorofentanyl and Testosterone
- ADB-FUBINACA and Etizolam

Additionally, under the DRUGTEST50_20x method, baseline separation was not achieved between:

- Buprenorphine and Trazodone

The possibility of co-eluting substances is an area where an analyst must stay on-guard. Changes to the system or column degradation may constitute an environment whereby baseline separation is no longer possible. The analyst must stay vigilant in the diagnosis of the system from week to week to determine if the system is capable of delivering accurate data that can be utilized in the separation and mass spectral identification of unknown compounds. Knowledge gained through training and experience should be utilized to make the appropriate determination as to whether a correct identification can be made or whether additional analysis and/or system diagnosis is required.

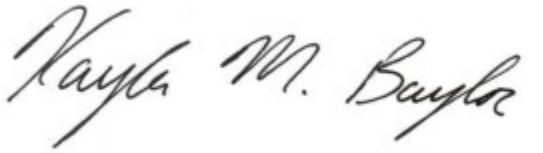

As with the previous performance check, no attempt was made to establish a limit of detection on this system set-up due to its qualitative nature. However, if newer methods are incorporated onto this system, limits of detection for commonly encountered drugs should be considered.

Table detailing standards analyzed on GC/MS #1:

024.2	Trazodone – Run #2	R-24-012	DrugTest50_20x	22.555

In conclusion, SD GC/MS #1 was evaluated for mass spectral and retention time identification based on its annual preventative maintenance visit. The system was able to correctly identify numerous substances by mass fragmentation patterns. Additionally, retention times were documented during this analysis. Retention times were slightly elevated as compared to past retention times. This was expected due to the column being new. The system is recommended for the continued GC/MS analysis of submitted samples to the Laboratory. This write-up, along with the checklist generated by the Agilent technician will be maintained on the share drive.
